TOPOUT

www.topout.org

Measuring an impressive 80 feet long, 50 feet wide and 25 feet high, Daggett Rock is Maine's largest known glacial erratic. This huge granite egg is split into 3 large fragments that offer some truly beautiful features to climb. Prominent arêtes, cracks, slabs, and faces are all available and most will take you over 20 feet off the ground.

Situated in the heart of rural Maine, Daggett Rock is definitely not the most convenient destination to get to, but it is well worth travelling off the beaten path to check out. The rock quality is excellent, the problems are fun and the landings are flat. Be warned though, this is not a destination for the lowball boulderer. Bring your highball mojo, or your top rope gear.

Seasons

Fall and early spring are the best times to climb here. The insects are bad in the spring and can persist throughout the summer. The rock is exposed so it does tend to dry fairly quickly after rain.

Access

Daggett Rock and the surrounding land are owned by the Town of Phillips. It sees regular traffic from tourists but probably doesn't see sustained climbing activity. Please practice standard bouldering ethics to ensure climbing can continue at this incredible destination.

History

Legend has it that two hundred years ago a woodsman named Daggett, drunk and angry at a raging storm, climbed the rock, took the Lord's name in vain and raged that he could not be struck down. A lightning bolt flashed from the sky, killing him instantly and cracking the rock into the fragments found today.

The reality is far less colorful, with the rock most likely splitting while being deposited by the glacier that moved it. In the early 1900s the rock and the surrounding land were donated to the Town of Phillips by the Daggett family.

Geology

During periods of glaciation an advancing glacier can move large boulders considerable distances from their points of origin. When the glaciers retreat these boulders are left behind and termed glacial erratics. Evidence from its crystal structure and geochemical makeup indicate that Daggett Rock originated 20km to the northwest in the Saddleback Mountain Range.

Food

There is a Five K Pizza on Main Street and a small grocery store on highway 4 in Phillips. A wider selection can be found in Farmington, located 30 minutes south east along highway 4, which is the nearest town of any size.

Accommodations

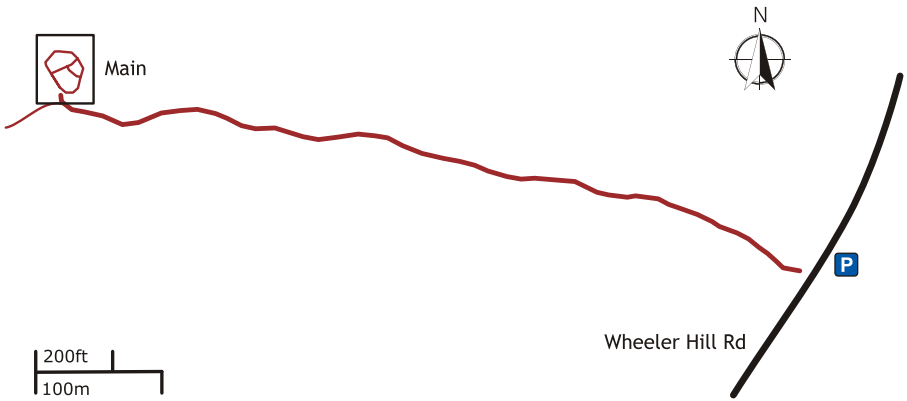

The nearest campground is a 30 minute drive south west in Mt Blue State Park (207-585-2347, 187 Webb Beach Rd), which is open from May 15th to October 1st. Follow highway 142 south from Phillips, turn right on Byron Rd, left on West Side Rd then left on Webb Beach Rd. All of these turns are marked with signs to the campground.

Distractions

There are at least two geocaches at Daggett Rock. The logbooks can make for interesting reads while you are recovering between sends. Be sure to add an entry about your visit if you find them.

Approach

Cross the road from the pullout to the access trail and follow it straight to the boulder. The approach is just over 500 meters of easy hiking with 60 meters of elevation gain.

Main

1. Thunderbolt V0- ***

Climb the crack. 25ft

2. Lightning Strikes Twice V0 **

Start as **Thunderbolt** then move into the crack to the right. 25ft

3. And the Thunder Rolls V0- **

Climb the slab. 25ft

4. I Like Piña Coladas V0 ***

Climb the left side of the arête. 25ft

5. And Getting Caught in the Rain V0- *

Climb the right side of the arête. 25ft

6. Spud Webb V0-

Climb the crack. 8ft

7. lip project

Traverse right along the lip. 25ft

8. face project

Climb the face. Could be several problems. 20ft

9. Vengeful God V4 ****

Climb the arête. 20ft

10. seam project

Start on the ledge on the left end of the seam. Traverse right along the seam to top out as **Reach for the Heavens**. 15ft

11. Reach for the Heavens V0 *

Start with your right hand on the small block under the roof and your left hand on the high jug (jump start if you are short). Traverse right along the seam. 15ft

12. lightning project

Climb the crack of **Thunder and Lightning** without using the arête. 25ft

13. Thunder and Lightning V1 ****

Climb the arête using the crack. 25ft

14. thunder project

Climb the arête of **Thunder and Lightning** without using the crack. 25ft

15. Righteous God V0 **

Climb up the ledges to the arête. Turn onto the slab at the seam or continue up to the peak (committing). 15ft

16. Loving God V1 *

Climb the arête without using the ledges of **Righteous God**. 15ft

17. left slab project

Climb the slab. 25ft

18. right slab project

Climb the slab. 25ft

19. crack project

Climb the crack. 25ft

20. arête project

Climb the arête. 20ft

21. crack project

Climb the crack. 25ft
